# The Preface.

Or as much as a-  
mongst many in-  
uention, that con-  
cerne the Mathe-  
matisks, none can  
be found comparable to this of the  
Logarithmes, the worthy labours  
of those Learned men which haue  
endeuoured to aduance it, are to  
be prized accordingly: These are,  
first John Neper, Baron of Mer-  
chiston in Scotland, who hath  
due right to challenge the first  
inuention of the Logarithmes in  
generall, Then Master Henry  
Briggs, Professor of Geometrie  
in the Vniuersitie of Oxford, to  
whom is duely attributed the in-  
uention, and fabrique of that kind  
of

## The Preface.

of Logarithmes, of which we treat  
in this ensuing Discourse, and  
which are farre more expedite,  
then those of Master Nepers in-  
uention; Lastly, Master Edmund  
Gunter, Professor of Astronomie  
in Gresham Colledge in London,  
who hath taken great paines in  
calculating of a Table contayning  
the Logarithmes of the Sines, and  
Tangents of all the degrees and  
minutes of the Quadrant. Now  
this Treatise following, is nothing  
else but an orderly Compendium  
as well of the construction, as also  
of the ioynt and severall uses of  
Master Briggs his first Chiliad  
of Logarithmes, and Master  
Gunters said Table. Concerning  
which you shall further obserue,  
that the three first Chapters ther-  
of are nothing, but an Abridge-  
ment of that, which Master Briggs

## The Preface.

divers in his Booke (intitled A-  
Arithmetica Logarithmetica) wherein I produce no other Tables  
or Examples, then those which bee  
there vseth; not onely because they  
are aptest to expresse the subiected  
matter, but likewise to the end  
that the examples of this Tract  
might bee the more obvious, and  
familiar to such as are verst in  
that learned Worke of his.

The occasion of composing this  
Treatise was this: In Anno 1624.  
I making a iourney into France,  
had the happynesse to bee the first  
transporter of the use of these in-  
ventions into those parts; whereas  
soone as I was arriued, divers Ma-  
thematicians of the chiefeſt note  
in Paris, refirting to my chamber,  
and I communicating vnto them  
ſ�ir the manifold uſes of the Lo-  
garithmes deſcribed vpon Master  
Gun-

## The Preface.

Gunters Crosse-staffe, they earnestly importuned mee to expresse them by some short Tractate in the French Tongue, which when I had composed, and prefixed thereunto a Preface declaring the whole History of the rare and exquisite Invention of Logarithmes, (viz. such as you find at the beginning of this) as also of Master Gunters rare invention for projecting the Logarithmes in plane, I was aduised by Master Alleaume the Kings chiefe Inginner to dedicat my Booke to Monsieur the Kings brother, whose fauourable admittance thereof, encouraged mee not long after to present him with this other Treatise also, which containing the grounds and demonstrations of all that was handled in the other Booke, he was also pleased graciously to accept. Thus ex-

pecting no lesse fauour at home,  
then I haue already received a-  
mongst strangers. I haue aduentu-  
red to expose this short Discourse  
to the publike view.

THE

THE  
CONSTRVCTI-  
ON AND VSE OF  
the Logarithme-  
ticall Tables.

CHAP. I.

*The definition and nature of  
Logarithmes in generall.*

Logarithmes are numbers; which being fitted to proportionall Numbers retayne alwayes equall differences:

So the proportionall numbers beeing, 1. 2. 4. 8. 16. 32. 64. 128. 256. 512. 1024. &c. You may appoint vnto them for Logarithmes the numbers,

2. *The Construction*

bers, subscribed vnder the letters A. B. C. D. or any other at pleasure; so that the differences of those Logarithmes bee alwayes equall, when the numbers, vnto which they are fitted, are proportionall.

	A	B	C	D
Pro- por- tional num- bers.	1	3	5	35
	2	6	8	32
	4	7	11	29
	8	8	14	26
	16	9	17	23
	32	10	20	20
	64	11	23	17
	128	12	26	14
	256	13	29	11
	512	14	32	8
	1024	15	35	5
		log.	log.	log.

Now

Now to the end that you may the more easily understand the nature of these Logarithmes, obserue this proposition following.

When of foure numbers given, the second exceeds the first as much as the fourth exceeds the third, the summe of the first, and the fourth is equall to the summe of the second and the third.

Example, these numbers 8. 14. and 17. and 23. beeing given, the summe of 14. and 17. beeing added together is equall to the summe of 8. and 23.

From hence followes this Corollary:

When foure numbers are proportionall, the summe of the Logarithmes of the meane num-

## 4. The Construction

numbers is equall to the summe of the Logarithmes of the extremes.

So the four proportionall numbers being, 2.8.15. and 64. And the Logarithme of 2. (in the Columnne of Log. subscribed vnder the letter C.) being 8. The Log. of 8. 14. The Log. of 16.17. And the Log. of 64.23. I say the summe of 14. and 17. The Log. of the meane numbers is equall to the summe of 8 and 23. The Log of the extreme numbers; as it appeares by the example of the Proposition afore-going.

## CHAP. II.

### *The nature of the Logarithmes*

nes spoken of in the Trea-  
tise following.

The numbers continually proportionall, which Master Brigs hath proposed to himselfe, are 1. 10. 100. 1000. &c. to which numbers hee hath assigned for Logarithmes, 0000 &c. 10000. &c. 20000. &c. 30000. &c. that is to say, To 1. the Log. 0000. &c. To 10 10000. &c. To 100. 20000. &c. To 1000. 30000. &c. And afterwards sheweth the way how to make the meane Logarithmes, viz. of the numbers placed betwixt 1. and 10. betwixt 10. and 100. betwixt 100. and 1000. &c. Some of which Log. you shall find in these Tables following.

In

# 8 The Construction

1.	A	B
1		00000000
10		10000000
100		20000000
1000		30000000
10000		40000000
100000		50000000
1000000		60000000
10000000		70000000

&c.

2.	C	D
	1	00000000
	2	03010299
	4	06020599
	8	09030899
	16	12041199
	32	15051499
	64	18061799
	128	21072099
	256	24082399
	512	27092699
	1024	30102999

&c.

In the first of which you may observe in the Col. marked by the letter A. a ranke of numbers continually proportionall from 1. And over against each number his Log. in the other columnne signed by the letter B.

In the second Table in the Columnne marked with the letter C. There is another ranke of numbers, which are also continually proportionall from 1. And just against each number his Log. in the other Columnne signed by the letter D. calculated according to the reason, and proportion of the Logarithmes in the first Table: So that supposing the Log. of 1. to be 0000. &c. and the Log of 10 to be 1000. &c. The Log. of 2. will be found 03010299. &c.

Now having put the Log. of 1. to

## 8 The Construction

1. to be 0000. &c. From hence (I say) necessarily follow these Corollaries.

1. In Multiplication the sum of the Logarithmes of the Multiplicand, and of the Multipli-  
cator is equall to the Log. of the product.

For as much as in euery Multiplication, there are four proportional numbers, *viz.* as 1 is to the Multiplicand, so is the Multipli-  
cator to the Product; and the Log. of 1. being 0. it is manifest by the Corollary of the last Chap. that the summe of the Logarithmes of the Multipli-  
cand, and Multipli-  
cator is equall to the Log. of the Product. For example, 16. beeing giuen to bee multiplyed by 4. The Log. of 16. in the second Columnne of the last Table is

12041199. and the Log. of 4. is 06020599. The summe of these Log. is 18061798. which is the Log. of 64. The product of the numbers giuen.

2. In Diuision the summe of the Log. of the Diuisor & of the Quotient is equall to the Log. of the diuidend; for as the Diuisor is to 1. so is the divid. to the quotient. For exāple, 64. being propounded to bee diuided by 4. the Quotient will be 16. and the summe of the Log. of 4. and 16. is cqual to the Log. of 64. As appeares by the example of the last Corollary.

3. In any ranke of numbers continually proportionall from 1. the Log. of any one of them being diuided by the number of the intervalles, which are contayned betwixt 1. and the same

## 10 The Construction

same number, the Quotient will giue you the Log. of the Root, *viz.* of the number, which in the same ranke is placed next 1.

So in the ranke of the proportionall numbers of the last Table, 2. being the Root, 4. the Square, 8. the Cube, 16. the Bi-square, 32. The fift power, 64. The sixt power, &c. I say the Log. of any one of them being giuen, and diuided by the number of the interualles, which are comprchended betwixt 1. and the number, vnto which the said Log. appertaynes; you shall finde in the Quotient the Log. Of the Root, 2. For example in the same ranke the Log. of 4. the Square, *viz.* 06020599. beeing giuen, I demand the Log. of 2. the Roote; the

the Intervalles betwixt 1. and the said square are 2. and therefore diuiding 06020599. The Log. giuen by two, I find in the Quotient 03010299. the Log. of 2. required. In like manner, the Log. of 8. the Cube, viz. 09030899. being giuen, I demand the Log. of 2. the Roote; the Intervalles betwixt 1. and that Cube are three, wherefore diuiding 09030899. by 3. I find in the Quotient 03010299. the Log. required. So 30102999 the Log. of 1024. (the tenth power being giuen, and the Intervalles betwixt 1. and the said number being 10. I diuide the same Log. by 10. Which done, the Quotient hath 03010299. the Log. demanded. The truth of this Corollary is euidently demonstrated by the

de-

definition of Logarithmes, which beeing fitted to proportionall numbers, retayne alwayes equall differences.

### CHAR. III.

*The Genesis, or fabrique of  
the Logarithmes treated  
of in the ensuing Discourse.*

**T**he Log. of 1. being put 0000. &c. the Log. of 10. 1000 &c. the Log. of 100. 20000. &c. In the next place it will bee requisite to shew the way how to make the Logarithmes of the meanenumbers, viz. Of 2. 3. 4. &c. which are situate betwixt 1. and 10. Of 11 R

12. 13. &c. which are placed betwixt 10. and 100. and so of the rest, which wee intend to explaine in the resolution of these Problemes following.

### PROB. I.

The number 10. beeing giuen to  
find as many meane proportion-  
nalls betwixt it, and 1. as shall  
be required.

**H**auing placed after the  
number 10. towards the  
right hand a great com-  
pany of Cyphers (to the end  
the operation may bee made  
the more exact) extract the  
square Root thereof, this done,  
extract the square Root of that  
Root, and then the square  
Root of the second Root, and  
so

## 14 The Construction

so consequently of the rest: Having thus done, so many square Roots as there are so extracted, so many meane proportionalls be there betwixt 10. and 1.

In the first Columne of the ensuing Table, you shall find 54 square Roots so extracted ; so that the number marked by the letter A. (which is written thus,

16227765016837933199889

3100000000000000000000000

354) is the square Roote of 10.

000) The number B. (which is written

77827941903832280

thus, 10000000000000000

119730413) is the square Root

0000000000) of the number A.

The number C. is the square Roote of the number B. &c.

which 54. square Rootes are so many meane proportionals betwixt 10. and 1.

After

After the same manner may you finde out as many meane proportionals, as you please, betwixt any other number given, and 1. which kind of operation is of great use in the construction of Logarithmetical Tables, as shall appear hereafter.

## PROB. II.

*The Logarithme of 10. being given to finde the Log. of all the meane proportionals contained betwixt 10. and 1.*

**T**HIS Probleme may easily bee resolued by the third Corollary of the last Chapter, for the number A. being the square Root of 10. deuiding the Log. of 10. by 2. You

R haue

## 16 The Construction

haue the Log. of the said number A. In like manner diuiding the Log. of the number A. by 2. You haue the Log. of the number B. and so proceeding in the same order, the Log. of all the meane proportionalls betwixt 10. and 1. may easily be found out.

For example, in the second Columne of the Table aforesaid, 100000. &c. being assignd the Logar. of 10. halfe of it, viz. the number D. is the Log. of the number A. and E. the Log. of the number B. and so consequently of the rest.

## PROB. III.

*A number being given, which being lesse then 2. and greater then 1. comes so neere unto*

to 1. that it hath 15. Cyphers towards the left hand before the significant figures of his Numerator; to find his proper Logarithme.

**B**efore wee come to the resolution of this Probleme, this proposition must bee obserued.

When a nūb. which being lesse then 2. & greater then 1. comes so neere to 1. that it hath fifteen Cyphers towards the left hand before the significant figures of his Numerator, the value of the significant figures of his Numerator is double the value of the significant figures of the Numerator of his square Roote.

For example, in the lower end of the Table aforegoing, the numb.G. (which is written thus,

## 18 The Construction

1 0000000000000051127659  
1000000000000000000000  
728012947) beeing propoun-  
000000000) ded, which be-  
ing lesse then 2. and yet  
greater then 1. hath fifteene  
Cyphers towards the left hand  
before the significant figures of  
his Numerator; I say, 51127659  
&c. the significant figures of his  
numer. are double to 25563829  
&c. the significant figures of the  
num. of the number H. the  
square Root of the said num-  
ber G.

From hence follow these cor-  
ollaries.

1. The significant figures of  
the num. of a number of this  
kind, and the significant figures  
of the num. of his square Roote  
lessen themselves like then

Lo-

Logarithmes, that is to say, by halffes.

For example, as the Log. K. is halffe the Log. I. so 25563829 &c. the sig. fig. of the num. of the number H. are the halffe of 51127659. &c. the significant figures of the num. of the number G.

2. Any two numbers of this kind being giuen, their Logarithmes, and the significant figures of their Numerators are proportionall.

Example, the numbers G. & H. being giuen; I say, as 51127659 &c. the significant figures of the num. of the number G. are to 25563829. &c. the significant figures of the num. of the number H. So is I. the Log. of the said number G. to K. the Log. of the said number H. In like

manner the numbers G. and L. being giuen ; as  $511:7659$ : &c. is to  $12781914$ . &c. So the Log. L. is to the Log. M.

And this Rule holds true in auy other number of this kind, though it bee not one of the meane proportionalls betwixt 10. and 1. For the significant figures of the num. of any such number beare the same proportion to his proper Log. that the sig. fig. of any of the numbers marked by the letters G. H. or L. beare to his.

These things being thus cleared, it is manifest, that a number of this kin d beeing giuen, the Log. thereof may be found by the Golden Rnle: for,

As the significant figures of the num. of any one of the numbers, signed with the letters

ters G, H, or L, are to his Log.  
So are the significant figures of  
the num. of the number giuen,  
to the Log. of the same num-  
ber.

I demand the Log. thereof; I say, as 51127659. &c. the significant figures of the num. of the number G. are to the Log. I. So are 10. the significant figures of the num. of the numb. given to 43429448. &c. the Log. required.

Prob. IV.

The number 2. being given to find  
the Log. therof.

You may find the Log. of 2.  
or of any number whatso-

euer, if first you search by the first Probleme of this Chapter, so many meane proportionalls betwixt the same number, and 1, till the meane proportionall, which comes nearest 1, hath fifteene Cyphers placed before the significant figures of his Numerator; for then by the last Probleme you may find the Log. of that meane proportionall, and lastly, by often doubling, and redoubling that Log. according to the number of the meane proportionals found, at last you will fall vpon the Log. of the number giuen: But because this way of making Log. in some numbers would be veray troublesome, by reason of the great company of square Rootes, which it should bee necessary to extract, by this example

ple following wee will shew you an easier. The Number 2. therefore beeing giuen, I demand the Log. thereof.

1. Multiply 2. by it selfe, the product is 4. then multiply the product 4. by 2. thereof comes 8. and so you must proceed, still multiplying the products by 2. the number giuen, till at last you happen vpon a product, which hath in the first place to wards the left hand the figure of 1. and in the second place a Cypher. Viz. in this example, the product 1024.

2. The prodnct 1024. beeing found, you must divide it by a number, which consisting of as many places as the said product, hath in the first place towardes the left hand 1. and in the other places towards the

right hand nothing but Cyphers; viz. by 1000. this done, the quotient  $\frac{1024}{1000}$  will bee

3. Search by the 1. Problem of this chapter, so many meane proport. betwixt the quotient  $\frac{1024}{1000}$  and 1. till you find one,

$\frac{1000}{1000}$ . that hath fifteene Cyphers before the significant figures of his Numerator; which in this example, after you haue extracted 47. square Roots will be found  $\frac{1000000000000000}{1000000000000000}$  to bee  $\frac{16851605705394977}{000000000000000}$ .

4. This meane proportioall thus found, search the Log. thereof, which by the last Probleme you shall find to be  $000000000073185593690623$

10.68.

5. This

5. This Log. being doubled will produce the Log. of the meane proportionall, next aboue the last meane proportionall found; and so by doubling successiuely the Log. of each meane proportionall one after another, (viz. seuen and forty times in all) at last you shall happen vpon the Log. of the number  $\frac{1024}{1000}$  which is 001 02999. &c.

6. If to the Log. of the quotient  $\frac{1024}{1000}$  you adde the Log. of the Divisor, 1000. which is 3000000. &c. the summe is 30102999. &c. viz. the Log. of 1024. the dividend by the 2. Corolary of the last Chapter.

7. Lastly, if you divide the Log. of 1024. by 10. thereof will

## 25 The Construction

will come 03010299. &c. Which by the 3. Corolary of the last Chapter, is the Log. of 2. required.

Having found the Log. of 2. you may easily finde the Log. of 5. For dividing 10. by 2. the quotient will bee 5. But the summe of the Logarithmes of the Divisor, and the quotient is equal to the Log. of the division by the second Corolary of the 3. Chapter, and therefore if you subtract 03010299. the Log. of 2. from 10000. so that the Log. of 10. the remainder 06989700. is the Log.

Now beside the Log. of 2. and 5. like facilitie may be had to find the Log. of any other number, by the Multipl. or Division of these three.

three numbers 2. 5. and 10. viz.  
or the numbers 4. 8. 16. 32. 64.  
8c. Of the numbers 25. 125. 625  
8c. Of the numbers 20. 50. 100  
200. &c. following the direc-  
tiona given you in the Corollaries  
of the last Chapter.

Furthermore in the same sort  
as wee have found out the Log.  
of 2. so may the Log. of any o-  
ther number whatsoever bee  
knowne. For example, the  
number 6. being propounded,  
I demand the Log. thereto. To  
doe this first multiply 6. by it  
selfe, thereto comes 36. Then  
multiply the product 36. by 6.  
which will produce 216. and so  
still multiplying the product by  
6. the number given, at last af-  
ter eight such Multiplications  
you shall find the product 1007  
7696. which is the ninth power  
of

of the Root 6. this done, dividing 10077696. by 10000000. the quo- 0077696 then ha-  
tient is 10000000 ving foud  
46. meane proportionals be-  
twixt the said quotient, and 1.  
that which comes neerest 1. is

Laft

Lastly, the Log. 70033612. &c. beeing divided by 9. (because 10077696. is the ninth power of 6. the number given) giues you in the quotient 07781512. &c. the Logarithme of 6. required.

And thus much shall suffice to hauespoken summarily concerning the Fabrique, and Construction of the Logarithmetical Tables, wee having no desire to calculate them anew, but onely to shew the manner and way, how they may be calculated.

Master Brigs about sixe or seven yeeres ago published a Logarithmetical Table, contayning the Logarithmes of all the numbers from 1. to a 1000. And this is the first of those Tables placed at the end of this Discourse,

course called more particularly, *The Table of Numbers*, concerning which these Rules following are to be obserued:

1. That it hath 2, columnnes, the first whereof marked by the letter N. contaynes all the numbers from 1. to a 1000. & in the second Columne, intitled by the particle (*Logarith.*) is placed just against each number his proper Log. Betwixt the Log. are also put other nū, which are the differences of the Log.
2. That the Logarithmes of the numbers comprehended betwixt 1. and 10. haue in the first place towards the left hand a Cypher, those of the numbers from 10. to 100. the figure of 1. and those of the numbers from 100. to a 1000. the figure of 2. &c. This first figure of the Log.

Log. wee call with Master Brigs the *Charakteristique*, whose office is to denote of how many places any number consistth; for the *Charakteristique* of enry Log. is always an Vnity lesse, then the number of places, wherof the number ( vnto which the same Log. appertaines) is composed. So the Charact. of 13010299. the Log. of 2. is 0. Of 13010299. the Log. of 20. is 1. Of 23010299. the Log. of 200. is 2. Of 33010299. the Log. of 2000. is 3. &c.

3. That although the Log. which wee haue put in the same Table are composed of eight figures; In most operations it will bee onely necessary to vse the first six figures thereof towards the left hand, as shall farther appeare hereafter.

About

About the same time Master Gunter calculated another Logarithmick Table, contayning the Logarithmes of the Sines and Tangents of all the degrees, and minutes of the Quadrant, which we call hereafter the *Table of Sines and Tangents*, and this is that, which wee haue placed afrer the said Table of Numbers.

## CHAP. IV.

*The use of the Logarithmickall Tables in finding out the Log. of any number, and the number of any Log. propounded.*

Hus farre concerning the construction of the Logarithmickall Tables; now

now come wee to the vse of them, which is twofold:

1. To finde the Log. of any number, or the number of any Log. giuen.

2. To resolute divers necessarie Problemes in Arithmetick and Geometry.

As for the first you shall find it explained in these Problemes following.

### PROB. I.

*A whole number beeing giuen, which exceeds not 1000. to find the Log. thereof.*

**S**earch in the first Columne of the Table of Numbers, the number giuen: this done just against it in the second Columne you shall finde his

his Log. So the Log. of 20. will bee found 13010299. the Log. of 100. 10000000. &c.

## PROB. II.

*A broken number being given, which exceeds not 1000. to find his Logarithm.*

**F**ind by the Probleme going before the Log. of the whole parts of the number given, then to know the number, that ought to be added to the Log. found in respect of the fraction. Observe the difference betwixt the said Log. found, and that which followes, this done, the proportion will bee as followeth.

As the Denominator of the fraction is to the Numer. so the differ-

difference betwixt the Log. found, and that which followes, is to another number, which being added to the said Log. found, the summe is the Log. required.

Example: This broken number 6 beeing giuen, I demand the Log. therefore the Log. of the whole parts, viz. of 100. by the Probleme going before is 200000. & the difference betwixt that Log. & 200432. the Log. that followes, is 432. I say then,

As 12. is to 6. so is 432. to 216. which being added to 200000 produceth 200218. the Log. required.

To resolute this Probleme and the like with facilitie, I referre you to the 8. proposition of the 6. Chapter of Master Gunters first

first Booke of the *Crosse-staffe*.  
By which the fourth number  
216. will be easily found out.

## P R O B . III.

.A Log. being giuen, whose Characteristique is 0.1. or 2. to find the number, of which it is the proper Log.

**S**earch the Log. giuen in the second columne of the Table of Numbers: this done, iust against it you shall finde the number required.

Example, 130102. being the Log. giuen, hauing found the said Log. in the second Col. intituled (*Logarith.*) ouer against it in the first Columne (marked by the letter N.) I finde 20. the number, to which the same

Logarithme appertaynes.

But when in the said Table of Numbers you cannot precisely find the Log. giuen, that Log. is the Log. of a broken number; now to find his proper number doe as followeth.

Search the Log. which comes neerest, and is lesse then the Log. giuen; then take the number that answers to that Log. found for the whole parts of the broken number you looke for: this done, to know the fraction of the said broken number, doe thus; Subtract the Log. found from the Log. giuen; this having done, the number that remaynes is the Numerator, and the difference betwixt the Log. found, and that which followes is the Dominator of the fraction required.

Ex-

Example, the Log. 220521  
beeing given, I demand the  
number, to which it belongs.  
The Log. which comes nextest,  
and is leſſe then 220521, is the  
Logar. 220411 ouer against  
which I find 160, which are the  
whole parts of the broken  
number I looke for; then sub-  
tracting 220411, the Logar.  
found from 220521, the Loga-  
rithme given, the num. that re-  
maines is 10. I conclude therefore  
**160**  $\frac{10}{270}$  is the Number  
to which 220521  
the Log. propounded apper-  
taines.

## PROB. IV.

Any number betwixt 1000. and  
1000000. beeing given, to  
find

finde the Logarithme thereof.

1. **F**ind by the first Probleme of this Chapter, the Log. of the three first figures of the number giuen towards the left hand.

2. In stead of the *Characte-ristique* of the Log. found place another, which shal fit the number giuen, viz. which is lesse by 1. then the number of places, whereof the number giuen is composed.

3. Obserue the difference betwixt the Log. found. & that which followes, and likewise take notice of the figures, which remayne to the number giuen towards the right hand, besides the three first figures towards the left hand; this done, the proportion will be such.

C

As

As a number which hath in the first place towardes the left hand the figure 1. and towards the right hand as many Cyphers as there bee figures remayning to the number giuen towards the right hand, is to the same figures so remayning.

So the difference betwixt the Log. found, and that which followes is to another number, which beeing added to the said Log. found will giue you the Log. required.

Example, 160232. being given, I demand the Log. thereof. The Log. of 160. the first three figures of the number giuen, is 22041199. Whose Charact. being 2. in place thereof (because the number propounded consists of sixe places) I put 5. this done,

done, the Log found becomes 52041199. Now the difference betwixt 22041199. the Logar. found, and that which followes is 27058. likewise the figures that remayne to 160232. the number giuen besides the three first figures towardes the left hand are 232. I say then,

As 1000. is to 232.

So is 27058. to 6277.

which being added to 52041199 the Log. found; the summe is 52047476. the Log. of 160232 demanded: In like manner, if the number 160004. were propounded, his Log. would bee found 52041307. for,

As 1000. is to 004.

So is 27058. to 108.

which being added to 52041199 the summe is 52041307. the Log. required.

## PROB. V.

A Log. being giuen, whose Charact. is 3. 4 or 5. to know the number, to which it appertaines.

**L**ooke (in the Table of Numbers amongst the Logarithmes, which are contained betwixt those of 100. & 1000.) for the figures, whereof the Log. giuen is composed towards the right hand besides his Charact. rejecting also the *Characteristiques* of the Logarithmes of the said Table; then take the number that answeres to the Log. found for the three first figures of the number you looke for: lastly, if the Log. propounded, hath for his Charact. 3. place towards the right hand

hand after those three first figures found one Cypher; if the Charact. bee 4. place two Cyphers; and if it bee 5. place three Cyphers; this done, you haue the number demanded.

Example, the Log. 52041199. beeing giuen, I demand the number, to which it belongs; hauing found in the Table of numbers the figures 2041199. just against them I finde the number 160. which are the three first figures of the number I looke for; then ( because the Charact. of the Logar. propounded is 5.) I place three Cyphers towards the right hand after 160. the number found: this done, the said number 160. becomes 160000. Viz. the number vnto which the Log. propounded appertaines. In like

manner the proper number of the Log. 42041199. is 16000. and the number of the Log. 32041199. is 1600.

But if the figures besides the *Charact.* cannot bee found precisely in the Table of numbers, the Logar. propounded is the Log. of a number, which besides the three first figures towardes the left hand is composed of some other significant figures towards the right hand: now to find the true number of a Logarithme of this kinde, follow this direction.

1. Search as before in the Table of numbers betwixt the Log. of 100. and 1000. the Log. which comes neerest, and is lesse then the Logar. propounded, neglecting the *Charact.* of the Logarithme giuen, as also chose

those of the Table.

2. Take the number that answers to the Logarithme found for the three first figures of the number required.

3. Subtract the figures which the Log. found hath towardes the right hand besides his *charact.* from the figures of the Logarithme giuen, that so you may haue the difference betwixt them.

4. Obserue the differeuce betwixt the Log. found, and that which followes; this done, the proportion will be thus.

As the difference betwixt the Log. found, and that which followes; is to the differece betwixt the said Log. found & the Log. giuen.

So 1000. is to another number, which ought alwayes to

consist of three figures ; whereof, if the *Charact.* of the Log giuen bee 5. you must take all, but if it be 4. take two towards the left hand ; lastly, if it bee 3. take onely one towards the left hand.

5. The figure, or figures thus taken, place towardes the right hand after the number that answeres to the Log. found ; this done, you haue the number you looke for : Now if besides the figures thus taken there bee others which remayne towardes the right hand , they are the numerator of a fraction, which belongs to the number found, which hath for his dehominator a numb. composed of 1. & as many ciphers towards the right hand, as there are figures left.

Example, the Log. 5204747

Being

Being propounded, I demand the number to which it apperaynes. Hauing rejected the Charact. of the Log. giuen, as also those of the Table, the Logar. which in the same Table being lesse then the said Logar. giuen comes neerest it is 2041199. ouer against which I finde the number 160. which are the three first figures of the number lookt for towardes the left hand: Now hauing substracted 2041199. ( the figures of the Logar. found besides the Charact.) from 2047476. ( the figures of the Logar. giuen besides the Charact.) the difference betwixt them is 6277. & the difference betwixt 22041199 the Log found, and that which followes is 27058. I say then, As 27058. is to 6277.

So is 1000. to 232.  
 which (because the *charact.* of  
 the Log. propounded is 5.) be-  
 ing placed towardes the right  
 hand after 160. the number be-  
 fore found, giues 160232. the  
 number required: But if the  
 Logarithme giuen were 4204  
 7476. his number would bee

2 and if it were  
 16023  $\frac{1}{10}$  32047476. the  
 numb. belonging to it would be  
 32 So the Log. 51041  
 1602  $\frac{1}{100}$  307. being giuen,  
 his number will bee found 1600  
 04. For,

As 27058. is to 108.

So is 1000. to 004.

## PROB. VI.

An Arke or Angle of any number  
 of degrees being giuen to finde  
 the

the Logarithme of the right  
Sine or Tangent of the same.

**L**ooke at the toppe of the Pages of the table of Sines and Tangents, the number of the degrees of the arke or angle giuen (viz. at the top of the left Pages if the number of the degrres exceed not 45. but otherwise at the top of the right Pages) and then the minutes (if there bee any) in the Columne marked by the letter M. this done, just ouer against in the Columne intituled by the particle (Sin.) you shall find the Logar. of the Sine, and likewise in the Columne sub-scrib'd vnder the particle (Tang.) you shall haue the Tangent of the arke or angle propounded.

So the Logar. of the Sine of an arke or angle of 23. degrees 30. minutes, is 96006997. and the Log. of the Tangent of the same arke is 96383019. In like manner the Log. of the Sine of 66.degrees 30.minutes is 99.623977. and the Log. of his Tangent is 103616981. and so of the rest.

Note, that when the arke or angle propounded exceeds 90. degrees, instead of it you must looke his complement to 180. degrees , according to that which is practised in the vse of the ordinary Tables of Sines, Tangents and Secants.

## PROB. VII.

The Logarithme of a right Sine, or Tangent being giuen; to find  
his

his correspondent Arke or Angle.

Search in the same Table of sines and tangents the Log. giuen, viz. in the Columnes marked by the particle (Sin.) if the Logar. propounded bee the Log. of a Sine, or in those subscribed vnder the particle (Tang.) if it bee the Logar. of a Tangent ; this done, in the top of the page after the Title (Sine or Tangent) you shall find the degrees ; and just against the Logar. found, in the Column marked by the letter M. you shall haue the minutes of the arke or angle required.

So 23. degrees 30. minutes is the correspondent arke to 960 06997. the Log. of the Sine of the same arke, and likewise to

to 96383019. the Log. of his Tangent.

Obserue, that although the numbers which you shall finde in the Table of Sines, and Tangents are properly the Logarithmes of the right Sines, and Tangents of the degrees of the quadrant, as is aforesaid; yet hereafter when wee haue any occasion to mention them, for breuity sake wee will call them Sines and Tangents without any other addition. So 96006997 is the Sine, and 96383019. the Tangent of 23. degrees 30. minutes.

Againe, instead of the termes (Sine or Tangent of the complement) wee will use with Master Gunter the words (Cosine, and Cotangent) so 96006997 is the Cosine, and 96383019. the

the Cotangent of 66. degrees  
30. minutes. In like manner  
99623977. is the Cofine, and  
103616981. is the cotangent of  
23. d. 30.m.

Lastly, when you cannot find  
precisely the Sine or Tangent  
you looke for, take instead ther-  
of that which comes neerest  
it.

## CHAP. V.

*The use of the Logarithme-  
ticall Tables in Arith-  
metique.*

Auing in the last  
Chapter shewed  
the first vse of the  
Logarithmeticall-  
tables, now followes the other,  
which

which concernes the resolution of diuers Problemes in Arithmetique and Geometry: Now as touching the vse of them in Arithmetique, you shall finde it exprest in these Problemes following.

### PROB. I.

*A number being giuen to multiply by another number, to finde the Product.*

**A**dde the Logarith. of the multiplicand to the Log. of the Multiplicator: this done, the summe is the Log. of the product.

Example, 30. being giuen to multiply by 25. I demand the product; the Log. of 30. by the first Probleme of the last

Chap-

Chapter is 147712. and the Logar. of 25. is 139794. the summe of these Log. is 287506. which by the third Probleme of the said Chapter , is found to be the Log. of 750. the product required.

Multiplicand	30	147712
Multiplicator	25	139794
Product	750	287506

### PROB. II.

A number being giuen to bee diuided by another number; to find the Quotient.

**S**ubtract the Logar. of the Divisor from the Logar. of the diuidend, the number that remaynes is the Logar. of the Quotient.

So 750. beeing giuen to be diui-

diuided by 25. the Quotient will be found 30.

Dividend	750	287506
Divisor	25	<u>139794</u>
Quotient	30	147722

### PROB. III.

To three numbers given to finde a fourth proportionall.

**A**dde the Log. of the second tearme to the Log. of the third, then from the summe of them substract the Log. of the first tearme; this done, the number that remains is the Log. of the fourth tearme demanded.

Example, let these three numbers 12. 6. and 432. bee given (as in the second Probleme of the last Chap.) to which it is

re-

required to finde a fourth proportionall: The Logar. of 6. is 077815. and the Log. of 432. is 263548. The summe of them is 341363. from which if I subtract 107918. the Logar. of 12. the first tearme, the number which remaynes is 233445. which by the third Probleme of the last Chapter is the Logarithme of 216. the fourth terme required.

As	12	107918
For	6	077815
So is	432	263548
		341363
To	216	233445

## PROB. IV.

Having three numbers given, to  
find

find a fourth in an inversed proportion.

**A**dde the Log. of the first and second termes together, then out of the summe substract the Log. of the third tearme; this done, that which remaynes is the Logarithme of the fourth termie required.

Example, if 60. men in 45. hours can make a Trench; in how many hours can 40. men make such another?

Men	60	177815
Hours	45	165321
		343136
Men	40	160205
Hours	67 $\frac{3}{643}$	182931

So that 40. men in the space of 67. hours and an halfe can  
doe

doe as much as 60. men in 45.  
houres.

PROB. V.

Having three numbers given, to  
 finde a fourth in a duplicated  
 proportion.

**D**ouble the difference of  
 the Logarithmes, which  
 belōg to the two termes,  
 that haue the same denomina-  
 tion; then (if the first terme be  
 leſſe then the ſecond) adde that  
 difference doubled to the Log.  
 of the other terme; this done,  
 the ſumme is the Logar. of the  
 fourth terme required.

So the ſuperficiall content of  
 a Circle; whose Diameter is 14.  
 inches, being 154. ſquare inches;  
 the content of another Circle,  
 whose

whose Diameter is 28. inches  
will be found 616.

Diameter	14	114612
Diameter	28	144715
Difference		30103
Difference doubled		60206
Content given 154		218752
Cont. required 616		278958

But if the first tearme bee  
greater then the second, sub-  
tract the difference doubled  
from the Logar. of the other  
tearme.

### Example.

Diameter	28	144715
Diameter	14	114612
Difference		30103
Difference doubled		60206
Content given 616		278958
Cont. required 154		218752

PROB.

PROB. VI.

Having three numbers given to  
find a fourth in a triplicated  
proportion.

**T**riple the difference of  
the Logarithmes, which  
belong to the two termes,  
that haue the same denominat.  
then (if the first terme bee lesse  
then the second) adde that dif-  
ference so tripled to the Log.  
of the other terme, and so shall  
you haue the Log. of the fourth  
terme demanded.

Example, if a Bullet, whose  
Diameter is 4. inches weigh 9.  
pounds; another Bullet, whose  
Diameter is 8. inches, will  
weigh 72. pounds.

Diameter

Diameter	4	060205
Diameter	8	<u>090305</u>
Difference		30103
Difference tripled		90309
Weight giuen	9	<u>095424</u>
Weight required	72	185733

But if the first terme be greater then the second, subtract the difference tripled from the Logarithme of the other terme.

### Example.

Diameter	8	090305
Diameter	4	<u>060205</u>
Difference		30103
Difference tripled		90309
Weight giuen	72	<u>185733</u>
Weight required	9	095424

### PROB.

## PROB. VII.

Any number being giuen; to finde  
the square Root thereof.

**D**ivide the Logar. of the  
number giuen by 2. this  
done, you haue the Lo-  
garithme of the Roote requi-  
red.

the number giuen	625	279588
the root required	25	139794

## PROB. VIII.

To finde the Cube Roote of any  
number giuen.

**D**ivide the Logar. of the  
number giuen by 3. this  
done, you haue the Log.  
of the Root required.

D

The

The number giuen	729	286272
The Root required	9	095424

## PROB. IX.

Betwixt two numbers giuen to  
find a meane proportionall.

**A**dde the Log. of the two  
numbers giuen ; then di-  
viding the summe by 2.  
you haue the Log. of the meane  
proportionall required.

The num- bers giuen	8	090308
	32	<u>150514</u>

The summe of the Log.	24082
-----------------------	-------

The halfe summe	120411
-----------------	--------

which is the Logar. of 16. the  
the meane proportionall de-  
manded.

## PROB.

PROB. X.

Betwixt two numbers giuen, to  
find two meane proportionals.

**H**aving found the difference betwixt the Logarithmes of the numbers giuen, and added the third part of it to the Logar. of the least number propounded, you haue the Logar. of the lesser meane proportionall you looke for; to which if you againe adde the same thrid part, you shall haue the Logar. of the other meane proportionall required.

Example.

Numbers giuen	{	8      090308 64      180617	<hr/>
The Difference			90,09
The third Part.			<hr/> 30103
The lesser m. prop.	16	120411	
The other m. prop.	32	150514	
	D 3		CHAP.

## C H A P. VI.

*The vse of the Logarithme-  
ticall Tables in the reso-  
lution of right line Tri-  
angles.*

Hus much brielly concerning the vse of the Logarithmetical Tables in Arithmetique: now followes the vse of them in Geometry, which is chiefly discouered in the resolution of Triangles: And now according to the diuision of Triangles into right lined, and Sphericall, wee will first shew the vse of them in the resolution of right line Triangles.

PROB.

PROB. I.

The three Angles, and one side of a right line Triangle beeing knowne; to find either of the other sides.

**A**S the sine of the angle opposed to the side giuen is to the parts of the same side: So is the sine of the angle opposed to the side required, to the parts of that side. And therefore,

Adde the Log. of the side giuen to the sine of the angle opposed to the side required; then subtract out of that summe the sine of the angle opposed to the said side giuen: this done, the number, that appertaynes to the Log. remayning, is the

D 3      length

length of the side you looke for.

Example, in the Triangle C. B. D. (which you shall finde in the first of the Diagrams placed after the Tables) let the angle D. be 122. deg. and the angle C. 43. deg. 20. min. and by consequent the angle B. (being the complement of the two other angles to 180. deg.) must needs be 14. deg. 40. min. And let the side D. C. being 100. paces represent the distance betwixt the two stations D. and C. this supposed, I demand the distance betwixt D. and B. The Log. of the side D. C. (viz. of 100.) by the first Probleme of the fourth Chapter is 200000. and the sine of 43. deg. 20. min. (the angle opposed to the side required) is 983647. by the 6.

Probleme of the same Chapter. The summe of these is 118  
3647. From which if I subtract 940345. the sine of the angle  
B. opposed to the side knowne,  
the Logar. which remaynes is  
243302. Vnto which (by the 3.  
Probleme of the said 4. Chapter)  
answeringes the number 271.  
which is the length of the side  
D. B. required, viz. 271. paces.

For

As the Sin. of	14.40.	940345
Is to the side gi.	100.	200000
So is the Sin. of	43.20.	<u>983647</u>
		1183647
To the side requi.	271.	243302

## PROB. II.

Two fides of a right line Triangle,  
and an Angle opposite to one of  
D 4 them

them being knowne ; to find the Angle opposed to the other side.

**A**S the side opposed to the angle giuen is to the sine of the same angle : So is the other side knowne , to the sine of his opposite angle . So the side D. C. being 100. the side D. B. 271. and the angle B. 14. degrees 40. min. The angle C. will be found 43. degr. 20. minutes. For

As the side D. C. 100 200000  
 To the sin. of B. 14.40. 940345  
 So is the side D.B. 271 243302  
1183647  
 To the sin of C. 43.20. 983647

### PROB. III.

Having two sides , and the Angle be-

betwene them, to finde the other two Angles, and the third side.

I If the angle included bee a right angle, the proportion will be such:

As the greater side is to the lesser: so is the Radius to the Tangent of the lesser angle.

So in the Triangle A. B. D. of the first Diagram the side A. B. being 230. and the side D. A.  $\frac{72}{100}$  the angle A. B. D.

**I43** will be 32. degrees.

For,

As the side 230 236172

Is to the side **I43**  $\frac{72}{100}$  215750

So is the Radius 1000000

1215750

To the Tang. of 32. deg. 979578

D 5 2 But

2. But if the angle included  
be oblique.

As the summe of the sides gi-  
uen is to the difference of the  
same sides: so is the Tangent of  
the halfe summe of the angles  
vnowne to the Tangent of  
the halfe of their difference.

Example, In the Triangle C.  
B. D. the side D. B. beeing 271.  
the side D. C. 100. and the an-  
gle D. 122. deg. I demand the  
angles B. and C. The summe of  
the sides D. B. and D. C. is 371  
the difference of them is 171.  
and the angle D. being 122. de-  
grees, the summe of the other  
angles vnowne is 58. deg. and  
therefore the halfe of it is 29.  
degrees. I say then,

As

the Log. Tables.

---

As the summe	371	256937
Is to the differ,	171	223299
So is the Tang. of	29.d.	974275
		1197674

To the Tang. of 14.20. 940737

Now these 14. deg. 20. min.  
being added to 29. d. the halfe  
summe of the angles vnowne  
the summe will bee 43. deg. 20.  
min. viz. the angle C. then sub-  
stracting the said 14. degr. 20.  
min. from 29. deg. you haue 14  
deg. 40. min. for the angle B.  
Lastly, knowing the three an-  
gles, and two sides, the third  
side may bee found by the first  
Probleme of this Chapter.

PROB. IV.

Having the three sides of a triangle  
to find the superficiall content.

**A**dde the three sides together, then from the halfe  
summe

summe subtract each side, to  
end you may haue the diffe-  
rence betwixt that halfe summe  
and each side ; this done, adde  
the Logarithmes of the said  
halfe summe, and of those diffe-  
rences together: And last of all  
diuiding the summe of those  
Logarithmes by 2. you haue the  
Logarithme of the content re-  
quired.

Example ; The three sides of  
the Triangle E. F. G. being 20  
13. and 11. how much is the su-  
perficiall content thereof? The  
summe of the sides is 44. the  
halfe summe is 22. the differen-  
ces betwixt each side, and that  
halfe are 2. 9. and 11. which  
numbers ranke in this order  
following,

*The*

The halfe summe	22	134242
	2	030102
The differences	9	095424
	11	<u>104139</u>

The summe of the Log. 363907  
The content required 66. 181954

This Probleme with the example I haue taken out of the 13. Chapter of Master Briggs his Booke intitled (*Arithmetica Logarithmetica*) whether I preferre you for a more ample explanation of the same.

## CHAP. VII.

The use of the Logarithme-  
ticall Tables in the resolu-  
tion of spherical triangles.

From Right Line  
Triangles come  
we to Spherical,  
and first to Rect-  
angle

angles Triangles. Where obserue that the side opposite to the right angle is called the Base, but the other two retaine alwayes the name of sides.

## In Rectangle Triangles.

### PROB. I.

The two sides being given to find the Base.

**A**S the Radius is to the cosine of one of the sides: so is the cosine of the other side to the cosine of the Base.

Example, In the Triangle A. B. C. of the 3. Diagram the side A. C. being 27. deg. 54. minutes,

nutes, and the side C. B. 11. degrees 30. minutes, the Base B. A. will be found 30. deg. For,

As the Radius	1000000
To the Cos. of	27.54. 994633
So is the Cos. of	11.30. <u>999119</u>
	1993752
To the Cos. of 30. deg.	993752

### PROB. II.

The two sides being given to know either of the oblique Angles.

**A**s the sine of the side next the angle inquired is to the Radius; so is the Tangent of the opposite side, to the Tangent of the angle required.

So in the same Triangle A.C. being 27. deg. 54. min. and B. C. 11. deg. 30. min. the angle A.

A. will bee found 23. deg. 30. min. For,

As the Sin. of 27.54.	967018
To the Radius	1000000
So is the Tan. of 11.30.	930846
	1930846
To the Tang. of 23.30	963828

### PROB. III.

The Base, and one of the oblique Angles being giuen, to finde the other oblique Angle.

**A**s the Radius is to the Cosine of the Base: so is the Tangent of the angle giuen, to the contangent of the angle inquired.

Example, the Base B.A. being 30. deg. and the angle A. 23. degrees 30. min. the angle B. will

be

be 69. deg. 22. minutes. For,  
As the Radius 1000000  
To the Cos. of 30. d. 993753  
So is the Tang. of 23.30. 963830  
1957583  
To the cot. of 69.22. 957583

## PROB. IV.

The Base, and one of the oblique  
Angle being giuen, to finde the  
side next unto the same Angle.

**A**s the Radius is to the  
Cosine of the Angle  
knowne: so is the Tan-  
gent of the Base, to the Tan-  
gent of the side required.

So B. A. beeing 30. deg. and  
the angle A. 23. deg. 30. min.  
the side A. C. will bee found 27.  
deg. 54.minutes. For,

As

As the Radius	1000000
To the Cos. of 23.30	996239
So is the Tan. of 30.0.	976143
	1972382
To the Tang. of 27.54.	972382

## PROB. V.

The Base, and one of the oblique Angles being knowne, to finde find the side opposed to the same Angle.

**A**s the Radius is to the sine of the Base: so is the sine of the angle giuen to the sine of the side inquired.

So B. A. being 30. deg. and the angle A. 23. deg. 30. min. the side C. B. opposite to the same angle will be found 11. deg. 30. minutes. For,

As the Radius	10000.0
To the sine of 30. d.	969897
So is the sine of 23.30.	<u>960069</u>
	1929966
To the sine of 11.30.	929966

## PROB. VI.

One of the sides and the oblique Angle next unto it being giuen,  
to find the Base.

**A**s the Cosine of the angle giuen is to the Radius: so is the Tangent of the side giuen to the Tangent of the Base.

Example, the side A. C. being 27. deg. 54. min. and the angle A. 23. deg. 30. min. you shall finde the Base 30.degrees.

For,

As

As the Cos. of 23.30. 996239  
 To the Radius 1000000  
 So is the Tang. of 27.54. 972384  
1972384  
 To the Tang. of 30. d. 976145

## PROB. VII.

One of the sides, and the oblique Angle next unto it beeing knowne, to find the other side.

**A**s the Radius is to the sine of the side giuen; so is the Tangent of the angle giuen to the Tangent of the side required.

So A.C. being 27. deg. 54 min. and the angle A. 23. deg. 30. minutes, the side C.B. will bee found 11.deg. 30. minutes. For,

As

As the Radius	1000000
To the Sine of 27.54.	967018
To the Tang. of 23.30.	963830
	1930848
To the Tang. of 11.30.	930848

## PROB. VIII.

One of the sides, and the oblique Angle next unto it beeing knowne; to finde the other oblique Argle.

**A**s the Radius to the Cosine of the side giuen, so is the sine of the angle giuen to the Cosine of the angle required.

So A. C. being 27. deg. 54. min. and the angle A. 23. deg. 30. min. you shall find the angle B. 69. deg. 22. min. For,

As

As the Radius	1000000
To the Cosine of 27.54.	994611
So the Sine of 23.30.	960061
	195470

To the Cosine of 69.22. 954701

### PROB. IX.

One of the sides, and the Angle oppoſed unto it being knowne; to finde the Base.

**A**s the Sine of the angle giuen to the Sine of the side giuen; so is the Radius to the Sine of the Base.

So the side B. C. being 11. d. 30. m. & the angle A. 23. d. 30. m. the Base will be found 30.0. For.

As the Sine of 23.30. 960061  
To the Sine of 11.30. 929961  
So the Radius 1000000

To the Sine of 30.0. 969896

PROB.

PROB. X.

One of the sides, and the Angle opposed unto it being given; to find the other side.

**A**S the Tangent of the angle given is to the Tangent of the side; so is the Radius to the sine of the side required.

So B. C. being 21.30. and the angle A. 23.30. the side A. C. will be 27.54. For,

As the Tan. of 23.30.	963830
to the Tan. of 11.30.	930846
to the Radius	1000000
	1930846
To the sine of 27.54.	967016

PROB. XI.

One of the sides, and the Angle opposed

posed unto it being giuen; to find the other oblique Angle.

**A**s the Cosine of the side giuen is to the Cosine of the angle giuen; so is the Radius to the sine of the angle required.

So B. C. beeing 11.30. and the angle A. 23.30. the angle B. will be found 69.22. For,

As the Cos. of 11.30. 999119

To the Cos. of 23.30. 996219

So the Radius 1000000

1996219

To the sine of 69.22. 997120

## PROB. XII.

One of the sides, and the Base being knowne; to find the oblique

Angle

angle adiacent unto the same side.

**A**s the Tangent of the base is to the Tangent of the side giuen; so is the Radius to the Cosine of the angle required.

So the side A. C. being 27. d. m. and the Base B. A. 30. d. m. the angle A, will be found .d. 30. m. For,

to the Tang. of 30. 0.	976143
to the Tang. of 27.54.	972384
to the Radius	<u>1000000</u>
	1972384

to the cos. of 23.30. 995241

### PROB. XIII.

One of the sides, and the Base being knowne; to finde the

E Angle

Angle opposed unto the same side.

**A**s the sine of the Base is to the Radius; so is the sine of the side giuen to sine of the angle required.

So A.C. being 27.d. 54. m. & B.A. 30.d.0.m. the angle B. will be found 69.d.22.m. For,

As the sine of 30. o. 969891  
To the Radius 1000000  
So the sine of 27.54. 957018  
1967018

To the sine of 69.22. 997111

#### PROB. XIV.

One of the sides, & the Base being giuen; to find the other side.

**A**s the Cosine of the side giuen is to the Radius: so is the Cosine of the Base

Base to the Cofine of the side required.

So A.C. being 27.d.54.m. and B.A. 30.d.0.m. the side B.C. will be found 11.d.30.m. For,

As the cos. of 27.54. 994633

To the Radius 1000000

So the cos. of 30. 0. 993753

193753

To the cos. of 11.30. 999120

## PROB. XV.

The two oblique Angles being given; to find the Base.

**A**s the Tangent of one of the angles is to the Cotangent of the other angle; so is the Radius to the Cofine of the Base.

So the Angle A. being 23. d. 30.m. and the angle B. 69.d.

22. min. the Base B. A. will be	
found 30. d.0. min. For,	
As the Tang. of 23.30. 9638;	
To the cotan. of 69.22. 95758	
So is the Radius	100000
	—
	195758
To the cosine of 30. 0. 99371	

## PROB. XVI.

The two oblique Angles being given; to find either of the sides

**A**S the sine of one of the angles is to the Cosine of the other angle; so the Radius to the Cosine of the side opposite to the Angle whose Cosine was taken.

So the angle A. beeing 23. 30. min. and the angle B. 69. 22. min. the side A. C. will be found 27. d. 54. min. For,

A

As the sine of	23.30.	960069
To the cosine of 69.22.	954701	
So is the Radius	1000000	
		1954701
To the cosine of 27.54.	994632	

In all Sphericall  
Triangles.

PROB. XVII.

Two Angles, and a side opposed to one of them beeing given to finde the side opposed to the other.

**A**s the sine of the angle opposed to the side knowne is to the sine of the same side; so is the sine of the angle opposed to the side required to the sine of that side.

So in the Triangle A.B.E. of the third Diagram the angle E being 38.d.15.m. the side B.A. 30.d.0. m. & the angle A. 23. d. 30.m. I demand the side B.E. I say then.

As the sine of 38.15. 979171  
 To the sine of 30. 0. 969851  
 So is the sine of 23.30. 960069  
1929968

To the sine of 18.47. 950791  
 which is the measure of the side B. D. required.

### PROB. XVIII.

Two sides, and an Angle opposed to one of them being known; to find the Angle opposed to the other.

**A**S the sine of the side opposed to the angle given, is to the sine of the same angle

angle; so is the sine of the side  
opposed to the angle inquired;  
to the sine of that angle.

Example, In the said Trian-  
gle A. B. E. the said B.A. being  
30. d. 0. m. the angle E. 38.d.15.  
and the side B.E. 18.d. 47.m. I  
demand the angle A. I say then,  
As the sine of 30. 0. 969897  
To the sine of 38.15. 979175  
So the sine of 18.47. 950784

1929959

To the sine of 23.30. 960062  
which is the measure of the  
angle A. required.

### PROB. XIX.

Two sides, and the angle included  
betwixt them being given; to  
find the other side.

To resolve this Probleme,  
it is necessary to let fall a  
perpendicular from one

of the angles vnowne vpon one of the sides giuen, and by this meanes to change the Triangle propounded into two Rectangle Triangles.

For example, the said Triangle A. B. E. being propounded, of which the sides A. B and A. E. as also the angle A are knowne, and the side B. E is required: Letting fall from the angle B. the perpendicular B. C. vpon the side A. E. by the 5. Probleme of this Chapter (for as the Radius is to B. A. so is the angle A. to the perpendicular B. C.) the Triangle A. B. E. becomes two Rectangle Triangles, viz. A. C. B. and B. C. E. Now the operation being thus prepared, in the Triangle A. C. B. the side B. A. and the angle A. being knowne, the side A. C.

may

may bee found by the fourth Probleme of this Chap., which being substracted from the side A.E. the remainder will bee C. E. viz. one of the sides of the Rectangle B.C. E. and by consequent in the said Rectangle B. C.E. the sides B.C. & C.E. being knowne, the Base B.E. (viz. the side required) may bee found by the first Probleme of this Chapter.

Sometimes the perpendicular will fall out of the Triangle propounded; so if the Triangle A. B. D. were propounded, the perpendicular would fall vpon the side A. D. being prolonged as farre as the point C. and in this case the two Rectangle Triangles are A.C. B. and D.C. B. and therefore the side B.D. required may be likewise

E. 5 found

found by the Problemes of  
Rectangle Triangles.

## PROB. XX.

*Two sides, and the angle include betwixt them being given; to find either of the other angles.*

**H**ere you must let fall a perpendicular from one of the angles unknown, upon the side adiacent to the angle required, and then resolute it by the Problemes of Rectangle Triangles, as before.

## PROB. XXI.

*Two sides being given, and one of the angles adiacent to the sid.*

unknowne, to finde the same side.

**H**is Probleme may be resolved also by letting fall a perpendicular from the angle included betwixt the two sides knowne vpon the side unknowne.

### PROB. XXII.

Two sides being given, and one of the angles adjacent to the other side; to find the angle included betwixt the sides given.

**F**or the resolution of this Probleme let the perpendicular fall from the angle inquired vpon his opposite side.

### PROB.

## PROB. XXIII.

Two angles being given, and the side adiacent unto them; to find either of the other sides.

**I**N this case you must let fall the perpendicular from one of the angles knowne vpon one of the sides vnkowne.

## PROB. XXIV.

Two angles being giuen, and the side adiacent unto them; to find the other angle.

**T**HIS Probleme is performed by letting fall the perpendicular from either of the angles knowne vp- on his subtending side.

---

PROB.

PROB. XXV.

Two Angles being giuen, and one of the sides adiacent unto the angle unknowne; to find the side adiacent unto the angles giuen.

**T**his Probleme is resolued by letting fall the perpendicular from the angle unknowne vpon the side required.

PROB. XXVI.

Two Angles being giuen, and one of the sides adiacent unto the Angle unknowne; to find the same Angle.

**T**o resolve this Probleme, you must let fall the perpendicular from the angle

gle vnaowne vpon his oppo-  
site side.

## PROB. XXVII.

*The three sides being knowne, to  
find any of the Angles.*

**A**ddc the three sides together, then from the halfe summe subtract the side opposite to the angle required; this done, the proportion will be as followeth.

1. As the Radius is to the sine of one of the sides, which comprehend the angle required; so is the sine of the other side that comprehends the same angle, to a fourth sine.

2. As that fourth sine is to the sine of the halfe summe of the sides; so is the sine of the differ-

difference berwixt the halfe summe, and the side opposed to the angle required, to a seuenth sine.

Now if you adde to this seuenth sine the Radius, halfe the summe which accyues vpon that addition will bee the sine of an arke, whose complement being doubled, will giue you the angle you looke for.

Example. In the said Triangle A.B.E. the side A. B. being 30. d. 0.m. the side B. E. 18.47. and the side A. E. 42. d. 51. m. I demand the angle B. The sum of the sides is 91. d. 38.m. halfe of this summe is 45. d. 49.m. and the side A. E. 42. d. 51.m. being substracted from that halfe summe there remaynes 2. d. 58. min. for the difference betwixt the said halfe summe, and the

the said A. E. I say then,

I.

As the Radius	1000000
To the Sine of 30. 0.	969897
So the Sine of 18.47.	950784
	1920681
To the fourth Sine.	920681

2.

As the fourth sine	920681
To the sine of 45.49.	985558
So the sine of 2.58.	871395
	1856953
To the seventh sine	936272
The Radius	1000000
The summe	1936272
The halfe summe	968136

which being searcht in the Table of Sines and Tangents will be

be found the sine of 28.d.42.m.  
whose complement is 61.d.18.  
min. which being doubled is  
122.d.36. *viz.* the measure of  
the angle A. B. E. required.

## PROB. XXVIII.

*The three Angles being knowne; to  
find any of the sides.*

**I**F in stead of the greatest angle, you take his complement to 180. deg. the angles change themselues into sides, and the sides into angles, and by consequent the operation will bee the same with that of the last Probleme.

**FINIS.**

Of 44.23.wr.99447600. Of 69.9  
wr.99705864. Of 70.42.wr.9574  
&c. Of 79.21.wr.9992.&c. And  
of 83.1.wr.9996.&c.

Item for the Tangent of 0.d.  
15.min.wr.76398201. Of 8.56.  
wr.91964402. Of 10.10.wr.9253  
&c. Of 15.7.wr.94315773. Of  
26.13.wr.9692. &c. Of 38.17  
wr.989. &c. Of 41.48.wr.99513  
80. Of 48.5.wr.10046. &c. Of  
58.43.wr.102163742. Of 60.1  
wr.1023.&c. Of 72.9.wr.10492  
&c. Of 79.3.wr.107133755. Of  
81.4.wr.108035597. Of 83.27  
wr.

11939. &c. And of \$4.47. w.  
11039. &c.

In the last page of §8. de-  
grees, after the title Tangent  
write §8.

These faults in the Tables  
being corrected you may pro-  
ceed to use them without fear  
of Error.

### *Faults in the discourse.*

Page 25. line 11. for 0001. n.  
001. And pag. 65. line 19. for  
50309. read 90309.

THE FIRST  
CHILIAD OR  
Logarithmes,

*Called in the Discourse  
aforegoing the Ta-  
ble of Numbers.*

By HENRY BRIGGS  
Sr. Henry Saulls Pro-  
fessor of Geometry in  
the Vniuersitie of  
Oxford.

## Triangulorum,

OR

A

### LOGARITHMETICALL T A B L E:

Wherein are set dovvne the  
Logarithmes of the Sines, &  
Tangents of all the De-  
grees, & Minutes of  
the Quadrant;

The Logarithme of the Radius, or  
Semy-diameter beeing  
100000000.

By Edm. Gunter Pro-  
fessor of Astronomy in  
Oxfham Colledge.

T

Place these *Diagrams* at the end of  
the Booke after the  
Tables, in such sort  
that they being vn-  
folded may appeare  
thowt the Booke  
when it is shure.
